

It was with great concern that I learned about the NAB's desire to limit what I choose to listen to. I am a subscriber of satellite radio because the stations I am able to receive free do not represent the content I am looking for. I strongly urge the rejection of petition 04-160! Satellite radio is obviously a threat to traditional radio because it finally gives listeners like me the opportunity to get information and music choices commercial free.

I am sorry that traditional radio is declining and the members of the NAB choose to prevent further decline by limiting free choice and competition - but they have no right to limit services that we choose to pay for. The fact that millions are choosing to pay \$10/month for radio content shows that we have no ability to get the news, weather, traffic, non-commercially viable music and talk that we seek on free radio.

We are not in communist China and the elimination of free trade and choice that NAB seeks would be yet another example of how rules and regulations by state and federal governments are designed to protect the wealthy few and the expense of the general population.

No to 04-160!
